

TOOTENIMETUS	SOODUS	HIND
--------------	--------	------

The ABUS 125/150 has 8 screws at different security levels. You can recognise these hasps, for example, by concealed screws. In addition, hardened steel eyelets for the padlock shackle are insulated inside the hasp and thus provide optimum protection against break-in attacks. Together with the appropriate padlock, the hasp then ensures the highest level of security when securing the door and gate. The ABUS 125 hasp is suitable for flush doors, i.e. the door panel and door frame are on the same level. To prevent unauthorised access, a padlock should be used, e.g. the ABUS Titantium 64TI/40.
