

ABUS 200/135

Tootekirjeldus

If you want to protect so-called flush doors (for example garden gates, cellar doors and similar) from unauthorised access, but a padlock cannot simply be hooked in, we recommend ABUS hasp 200. Thanks to the hardened steel eyelet and the concealed screws, which offer hardly any attack surface, breaking open is significantly more difficult.

Technologies:

- Corrosion protected
- Steel construction
- Hidden screws
