

Võutmete lõikamismasin Keyline Arcadia

Tootekirjeldus

- Arcadia is Keyline's key cutting machine for tubular keys.
- It can be used to cut tubular keys of several brands, thanks to the wide, ever expanding range of adapters available.
- It was manufactured pursuant to the most recent safety standards. The electronic control starts the cutter only when it is close to the key; the high-security protection barrier and the LED light enhancing visibility in the work area make it possible to use this machine reliably, safely and pleasantly.
- Thanks to the perfect engineering of its mechanism, it is also possible to use existing key cutting adapters, which, in turns, leads to the optimisation of the investment.
